Hypodermic Needles

Hypodermic needles for single use. The hypodermic needles stand for optimised siliconisation of needle tube, high pull-out forces of cannula-hub-connection, state of the art anti-coring treatment of needle tube, precision lancet point according to ISO 9626 with exact smooth bevel cut and consistent low penetration load of needle and skin.

- A range of sizes specially designed for the veterinary profession
- Siliconised needle tubes for improved slippage
- Made of high quality stainless steel
- Delicately designed, facet shaped needle point with features of sharpness, smooth puncture, less damage to the tissue, less painful feeling to the patient
- Semi-transparent plastic needle hub for the convenient observation of blood reflux with ISO colour-code for quick identification of needle diameter
- Sterilised by ethylene oxide

A short bevel type has a greater angle compared to a regular bevel and because of this, it may facilitate the injection of fluids with high-viscosity.

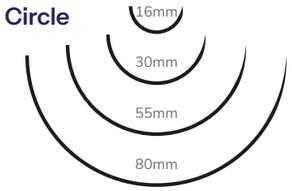
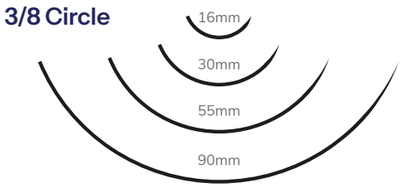
Straight

1/2 Circle



3/8 Circle



Covetrus needles are crafted from special hardened, hard-fibre stainless steel to ensure superior sharpness, high ductility, and exceptional bending strength. Precision grinding and dimensional stability guarantee optimal positioning in the needle holder, contributing to a high level of safety and performance in clinical use.

Wound Care

Manuka Honey Gel

Sterile medical-grade Manuka honey helps maintain a moist wound environment that supports healing.

Rich in Methylglyoxal (MGO), it is standardized for antibacterial efficacy and sterilized for safety. Sourced from 100% Leptospermum scoparium honey from New Zealand, it promotes autolytic debridement, supports granulation, and reduces wound odor. Its low pH prevents bacterial growth.

Under veterinary supervision, it can be used for trauma, surgical, ulcerated, infected, and persisting wounds, as well as 1st and 2nd degree burns, lacerations, and abrasions. Available in 15 g and 42.5 g single-use tubes, it minimizes cross-contamination and can be applied directly to the wound or dressing.

Three-chambered Petri Dish with DTM / ESA / SAB

The fungal culture test consists of individually wrapped three-chambered petri dishes with removable lids that allow for easy inoculation and collection of samples for identification. Each plate contains a Dermatophyte Test Medium (DTM), an Enhanced Sporulation Agar (ESA) and a Sabouraud agar (SAB) and is designed to diagnose the most relevant veterinary pathogenic fungi called dermatophytes: Microsporum, Trichophyton and Epidermophyton spp.

It contains Dermatophyte Test Medium (DTM) and is designed to diagnose the most relevant veterinary pathogenic fungi called dermatophytes: Microsporum, Trichophyton and Epidermophyton spp. Like DTM, ESA contains supplements to inhibit growth of bacteria and saprophytic fungi, but the colour change is from yellowish to blue-green.

What makes ESA unique is that it enhances both pigmentation and sporulation of dermatophytes, thus allowing for proper identification of the fungal isolates.

Handheld Refractometer

Handheld Refractometer for Colostrum

Handheld Brix refractometer which enables quick and reliable evaluation of colostrum quality by estimating IgG levels. With stable IgG concentration between 24–72 hours, the device helps determine whether passive transfer in newborn calves has been successful.

- Measurement range: 0–32% Brix with 0.20% resolution
- Easy evaluation: Brix ≥ 22% indicates high-quality colostrum (>50 mg/ml IgG)

Item	Size
2802110	26 x 40 x 170 mm

Handheld Refractometer for Serum Protein and Urine Specific Gravity

Handheld refractometer for fast and accurate measurement of animal physiological fluids, including urine specific gravity, serum protein and refractive index.

Three-scale measurement:
- serum protein (0–12 g/dl)
- urine specific gravity (1.000–1.040)
- refractive index (1.3330–1.3600)

Item	Size
2802250	26 x 40 x 170 mm

Centrifuges

Digital Centrifuge Benchtop

Table-top digital centrifuge for routine applications such as concentration of cellular suspensions, separation of serum or plasma etc. With a compact and stable design, it presents digital adjustment of centrifugation speed and time.

NutriCareVet - Hairball Remedy

Feline Supplement - CatLax Hairball Remover

CatLax paste helps the flow of ingested fur through the gut to prevent hairball formation.
Cats can easily pick up hair from frequent grooming, which causes hairballs to form. Ingested hair can become lodged in the digestive tract and form a cluster or hairball. Symptoms of hairballs include choking, coughing, vomiting, and constipation. Hairballs can be avoided with frequent grooming and routine use of CatLax.

- CatLax contains ingredients that gently lubricate the digestive tract to prevent hairball build-up
- The paste acts as a lubricant that coats the swallowed hair and allows the hairball to travel down the digestive tract
- It has a mild laxative effect that penetrates hardened stool so it can be passed
