OxiBlock®

The new OxiBlock® coating on the inside of the cartridge gives you a contamination-free environment for the gas. What we have seen is that without our OxiBlock® coating you are not able to obtain a contamination inside of the gas cartridge. This affects the durability and purity of the gas.

Warranty PLUS

With the meticulous control of all production steps of the gas cartridges, we are able to offer you, that if any faults in the devices from CryoIQ® or Cryoalfa® appears caused by use of CryoIQ® gas cartridges we will replace unit with a new equal CryoIQ® device. Just remember that it is important that you follow the cleaning instructions in our User Guide.

Filling

All of our cartridges are filled in-house. We have put a lot of efforts in developing a unique gas filling station that has the latest technique to optimize filling of cartridges. To establish a more precise and clean filling process, the filling station itself is equipped with nine separate 5 micron gas filters to ensure 100% purity. With our in-house filling process, we have 100% traceability of the gas used in our cartridges.

It was important for us to find an independent solution where we could fill and refill our cartridges. We have a close cooperation with Nippon Gas who is our consultants and manufacturer of gas, but more importantly, we have the in-house knowledge. Today we have in our production two filling stations and are now looking for a fully automated filling line, with a capacity of more than 500 gas cartridges per day to meet future demand.

N_2O gas

With our filling process, we can ensure that the gas we use is kept 100% clean during the entire filling process.

Cap

The fine and precise thread in the valve requires a precise cap to seal completely. Our new cap construction is in fine metal and it has its own sealing to ensure an even better shelf life for the cartridges.

Shelf Life

Together with our gas manufacturer, Praxair, we have implemented a Just-In-Time system so that we can always offer you as our dealer the best shelf life for your gas cartridges. From the production day of the gas the durability is 3 years and with our system we never have gas older than 1 month in our production.

What we have seen before is that larger batches of production results in shorter shelf time for the gas cartridges. With our Just-In-Time system we have adjusted our production so that we never need to hold unnecessary stock. This system is also very cost effective which enables us to keep our prices low.

How to order

If possible, please send your order via email.
For customers within the EC community it is important that the VAT number is included in the order.

Warranty

There is a 1+1 year warranty against technical defects. The warranty is strictly limited to the exchange of defective parts. Dropped devices or broken tips are not under warranty. Other claims for damages such as loss of working hours, incorrect treatment and their consequences, non-executed after treatment and their consequences as well as the non-observance of the safety instructions are excluded from all warranty and liability.

Warranty claims:
All Warranty claims must follow the “Warranty Claim” form that can be downloaded from http://www.cryoiq.com/warranty. Please notice that the end-user invoice has to be attached to the Warranty Claim.
