PRO range

For the specialists that works with more advanced cryo-surgery. Large selection of exchangeable freezing tips for different type of skin lesions. Uses cartridges with valves.

PRO model

CryoIQ® | PRO for spray freezing
CryoIQ® | PRO for contact freezing ø1, 3, 5, 7 mm

Gas Cartridges with OxiBlock® Technologies

The new coating OxiBlock® on the inside of the cartridge gives you a contamination-free environment for the gas. With this technique, we are the first brand that can offer you a cartridge that meets the new upcoming Medical Device Directive.

What we have seen is that without our coating you are not able to obtain a contamination free surface inside. This effects the durability and purity of the gas.

CryoIQ global is the producer of the CryoIQ technology. All products are Made In Sweden.

The products are design protected all over the world.

CryoIQ® and OxiBlock® are registered trademarks of CryoIQ global

CRYO IQ

CryoSurgery
The Innovative Way

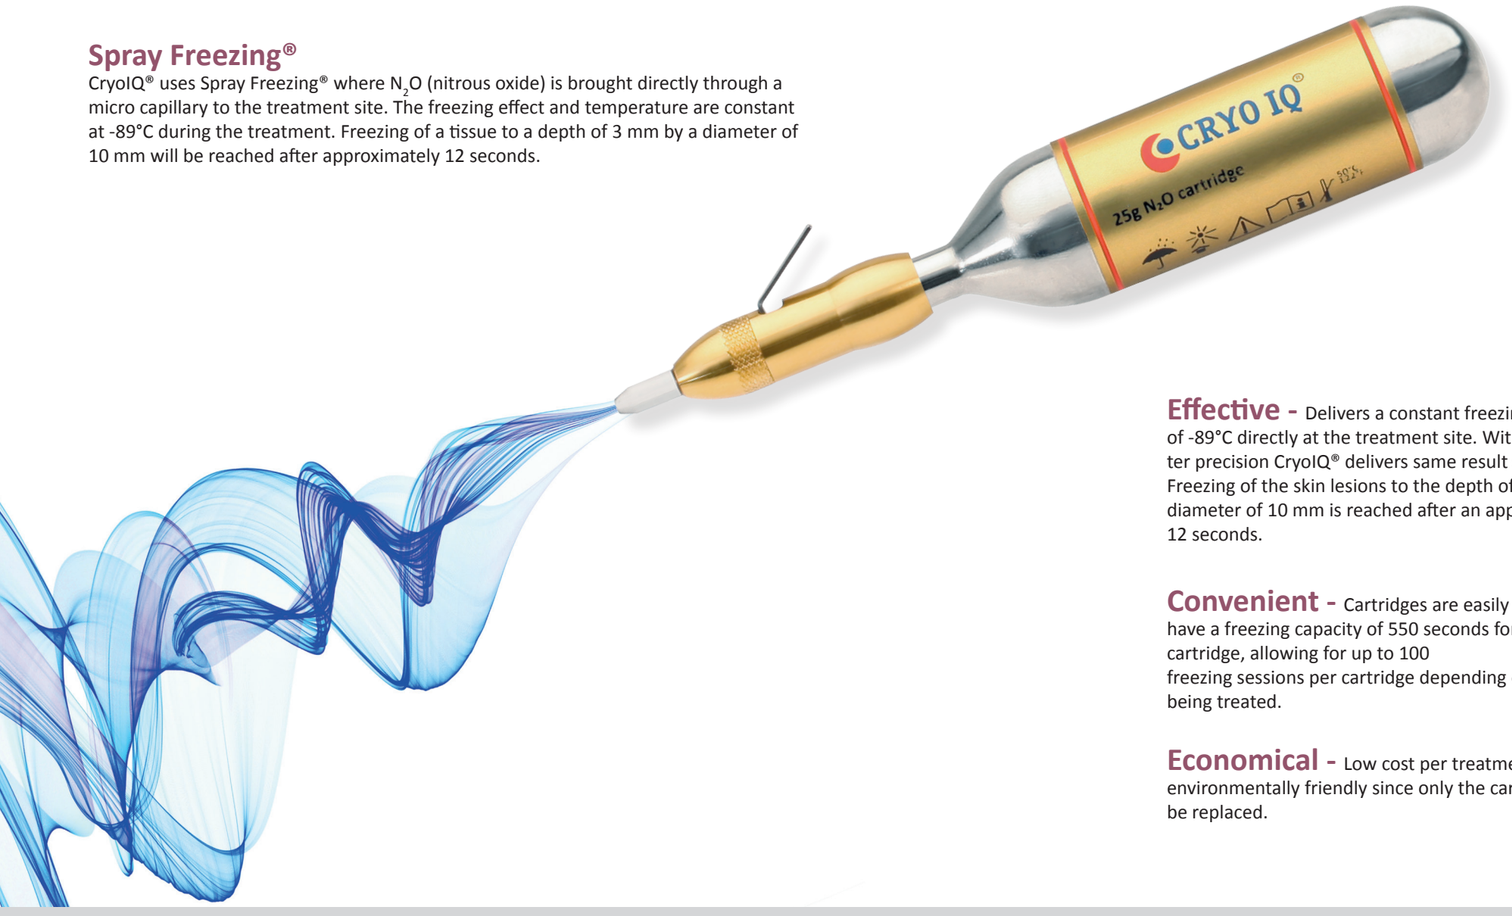

MADE IN SWEDEN

Innovative cryosurgery at -89°C

CryoIQ® is a portable and effective device for removal of warts, skin tags, fibroma, keratosis, heamangioma, solar lentigo and other common skin lesions. Cryosurgery treatment is recognized as a low pain treatment without need for preparation or follow-up care. The CryoIQ® devices have been developed during a long time and thus have a unique performance. The unique cartridge construction with the built-in valve prevents leakage of content. CryoIQ® devices are safe to use and do not require any maintenance at all.

Spray Freezing®

CryoIQ® uses Spray Freezing® where N_2O (nitrous oxide) is brought directly through a micro capillary to the treatment site. The freezing effect and temperature are constant at -89°C during the treatment. Freezing of a tissue to a depth of 3 mm by a diameter of 10 mm will be reached after approximately 12 seconds.

Effective - Delivers a constant freezing temperature of -89°C directly at the treatment site. With a millimeter precision CryoIQ® delivers same result every time. Freezing of the skin lesions to the depth of 3 mm by a diameter of 10 mm is reached after an application time of 12 seconds.

Convenient - Cartridges are easily exchanged and have a freezing capacity of 550 seconds for the 25 gram cartridge, allowing for up to 100 freezing sessions per cartridge depending on the lesion being treated.

Economical - Low cost per treatment, environmentally friendly since only the cartridge has to be replaced.
