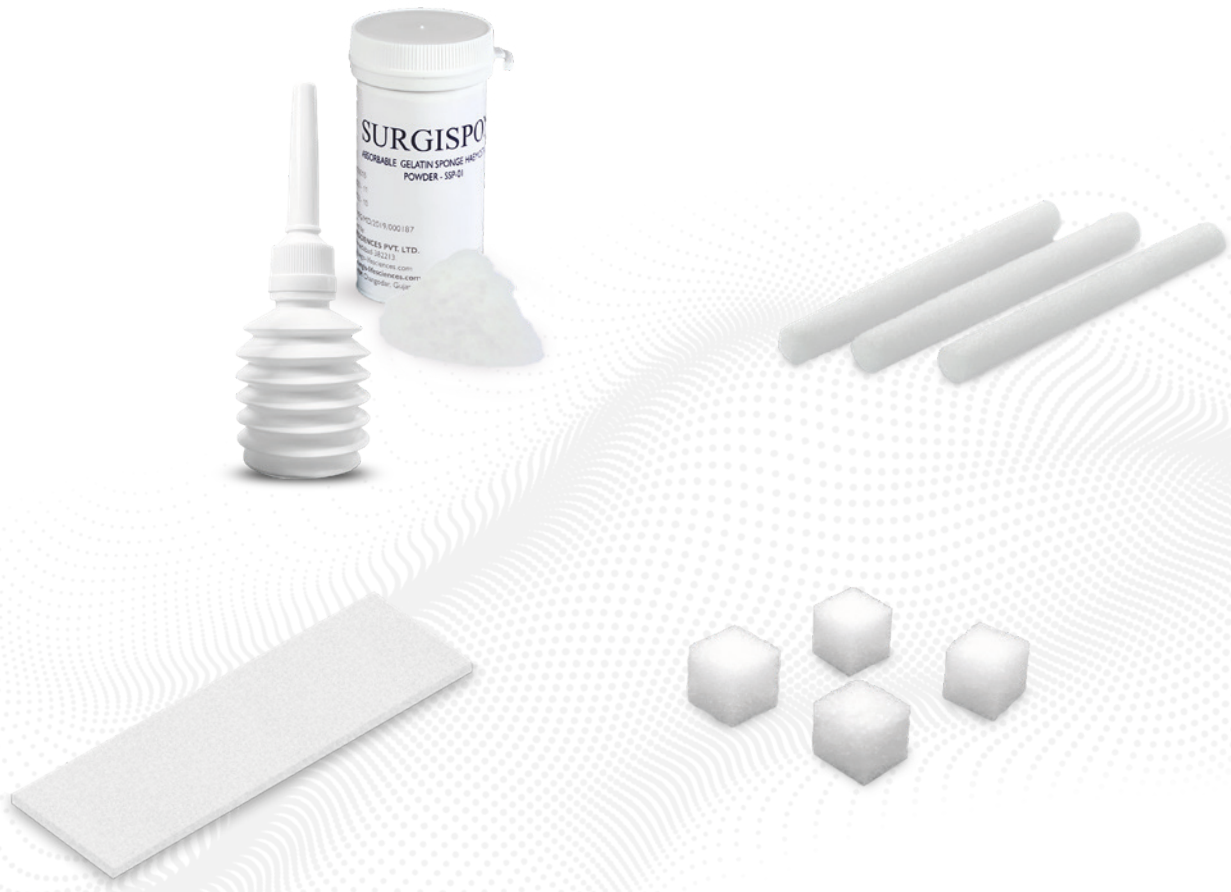
Gelatin Sponge

Absorbable and hemostatic



SURGISPON®

Shaping the future of ENT care
smarter, safer and beyond limits

Absorbable Hemostatic Gelatin Sponge

SURGISPON®

Our hemostatic solution for ENT specialists

Our product range for **intra- and post-operative hemostasis** has been specifically tailored to the needs of ENT specialists. In order to provide you with the best possible support in treating your patients, we offer hemostatic agents in various sizes and designs. **SURGISPON®** products are available as nasal strips, cubes, blocks, and powder. They are made of high-quality, pharmaceutical-grade gelatin and are **completely absorbable**, supporting safe and efficient use.

Absorbable Hemostatic Gelatin Sponge

Our hemostatic agents provide a reliable and efficient solution for bleeding control – fast, safe, and highly versatile. Not only do they effectively stop bleeding, but they can also serve as a carrier for antibiotics or other medications. With exceptional absorbency, they bind up to 45 times their own weight in blood and are flexible enough to adapt to different applications. Depending on use, they are fully absorbed by the body in less than four weeks.

Advantages

- Effective blood clotting
- Carrier for antibiotics and active ingredients
- Absorbs up to 45 times its own weight in blood
- Fully absorbable in less than 4 weeks

SURGISPON® Powder

Absorbable Hemostatic Gelatin Sponge Powder, sterile

Art.-No.	Weight	Packaging (Containers/box)
SSP-01	1 g	6
SSP-01B*	1 g	6
SSP-03B*	3 g	6

* with pump spray bottle

Properties

The powder is suitable for filling interstitial spaces due to its ease of application. The consistency of the paste can be adjusted to the application by varying the amount used to control bleeding in the sinus area, such as sphenoid sinus bleeding.

SURGISPON® Standard

Absorbable Hemostatic Gelatin Sponge, sterile

Art.-No.	Dimensions	Packaging (pieces/box)
SSP-805010	80 × 50 × 10 mm	10

SURGISPON® Cubes

Absorbable Hemostatic Gelatin Sponge, sterile
ideal for otosurgical procedures

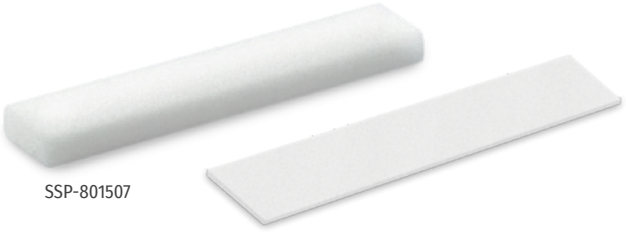
Art.-No.	Dimensions	Packaging (pieces/box)
SSP-101010	10 × 10 × 10 mm	32

SSP-4C

SURGISPON® Strip

Absorbable Hemostatic Gelatin Sponge, sterile

Art.-No.	Dimensions	Description	Packaging (pieces/box)
SSP-401010	40 × 10 × 10 mm		5
SSP-4C	40 × 10 × 02 mm	compressed	5
SSP-202007	20 × 20 × 07 mm	sheet	20
SSP-200705	200 × 70 × 0,5 mm	film	10



SSP-801507

SSP-12C

SURGISPON® Nasal Strip

Absorbable Hemostatic Gelatin Sponge, sterile

Art.-No.	Dimensions	Description	Packaging (pieces/box)
SSP-801507	80 × 15 × 07 mm		10
SSP-12C	80 × 15 × 02 mm	compressed	10

SURGISPON® Nasal Tampon

Absorbable Hemostatic Gelatin Sponge, sterile

Art.-No.	Dimensions	∅	Packaging (pieces/box)
SSP-8007	80 mm	7 mm	20

Before

After

Gelatin sponge inserted under the graft to secure it to the tympanic membrane

Gelatin sponge packing for posterior epistaxis

Where to use

- Myringoplasty
- Tympanoplasty
- Stapedotomy
- Reconstruction after radical cavity surgery
- Tonsillectomy
- Adenoidectomy
- Surgical treatment of peritonsillar, para- and retro-pharyngeal abscesses
- Epistaxis
- Nasopharyngeal cysts
- Dural lesions in paranasal sinus surgery

Application in simple steps

Moisten the high-density hemostatic sponge with an antibiotic solution or sterile saline solution.
It can also be used dry.

Dry application

Cut the sponge to the desired size and squeeze lightly. The sponges must be applied to the bleeding area for one to two minutes while applying light pressure.

Wet application

Remove the SURGISPON® ENT cube and squeeze it thoroughly between gloved fingers to remove air bubbles. Soak it in sterile saline solution and keep it there until use. Place the cube on the bleeding area until bleeding stops.
